

TESTIMONIAL

John Cockerill Defense is a Belgium-based defense technology company specializing in advanced weapon systems and turret solutions for light and medium-weight armored vehicles. Drawing on the John Cockerill Group's industrial heritage of more than 200 years, the company combines expertise in ballistics, software engineering, mechatronics, training, and lifecycle support. Its systems are deployed by armed forces worldwide through an expanding international footprint. Following its 2024 acquisition of French military vehicle manufacturer Arquus, John Cockerill Defense broadened its capabilities beyond weapon systems to become a provider of integrated land-defense solutions, combining advanced turrets with highly mobile armored vehicles.

In this testimonial, we speak with Alice Roger, Site Manager, to understand how B Medical Systems' solutions support their missions and contribute to the seamless, high-stakes reality of reliability across rugged operational environments from military field operations to large-scale emergency responses.

- **Could you please describe your role at John Cockerill and the key activities and responsibilities it involves?**

I am the Site Manager, responsible for supervising all activities and ensuring they are properly executed. My role also involves business development, seeking new opportunities to support the future growth of the site.

- **Which products from B Medical Systems are currently used by John Cockerill?**

We ordered more than 100 units of RCW25 as part of the execution of a project with Belgian Defence's Directorate General Material Resources supporting Ukraine.

- **How would you describe your experience working with B Medical Systems as a partner?**

Professional, flexible and efficient.

- **Would you recommend B Medical Systems to other defense organizations? If so, why?**

Absolutely. Great products and the possibility of customized/ tailor-made solutions.
